Aryan Khanna

MBA Candidate (Finance) | Business Analytics, Data Quality & Reporting
+91 9810313329 | aryan10082002@gmail.com | New Delhi, India

PROFESSIONAL SUMMARY

Finance MBA candidate with hands-on experience across billing, sales records, inventory, accounts and day-to-day business operations, who has grown into analytics: building reports and dashboards that help managers make decisions. Strong in Excel, SQL, Tableau and Python, with a careful eye for data accuracy, process gaps and clear documentation. Works comfortably across teams and turns raw business data into insight that non-technical stakeholders can act on. Seeking an Analyst role in Business Data Services where a practical, business-first approach to data quality and reporting adds value.

SKILLS

Analytics & Reporting: Business Analytics, Data Analysis, Dashboard & Report Building, Data Visualisation, Data Modeling, Sales / Purchase / Inventory / Accounts Analysis, Forensic Data Analysis (introductory)

Finance & Risk: Accounting, KPIs, Risk Management, Credit & Lending, BCO, Quantitative Analysis of Financial Decisions, Financial Risk Management, Corporate Taxation, Financial Reporting, Fixed Income Securities

Data Quality & Process: Data Quality Review, Data Governance Awareness, Process Improvement, Attention to Detail, Documentation & Record Keeping

Delivery & Collaboration: Project Management, Research & Benchmarking, Cross-Functional Collaboration, Written & Verbal Communication

Spreadsheets & Office: Microsoft Excel (Formulas, Pivot Tables, Charts), Microsoft PowerPoint, Microsoft Word, MS Office Suite

Data & BI Tools: SQL, PostgreSQL, Tableau, Pandas, AI-enabled Tools

Programming: Python, JavaScript, Basic C++

Web, API & Cloud: FastAPI, REST API Development, Supabase (PostgreSQL, Auth), Token-based Authentication, LLM Integration (Groq API), Prompt Engineering, GitHub, Render, Vercel

PROFESSIONAL EXPERIENCE

Business Analyst Intern

Apr 2026 – Oct 2026

MK Enterprises, Delhi

- Analysed sales, purchase and inventory data using advanced Excel to identify sales trends, assess business performance and support data-driven decisions, contributing to 12% sales growth during the internship.
- Developed Excel-based reports using PivotTables, lookup functions and SUMIFS to consolidate transactional data and track sales performance, inventory movement and purchasing patterns.
- Monitored inventory movement and product demand to identify stock discrepancies and potential replenishment needs, supporting more informed purchasing decisions.
- Reconciled sales, purchase and accounting records, investigated discrepancies and improved the accuracy and consistency of internal business reporting.
- Standardised Excel reporting formats and data-entry workflows, making business records easier to analyse, verify and maintain.

Business Analyst & Operations Associate

Jul 2024 – Jun 2025

Geeta Labels (Family Business), Delhi

- Prepared GST and tax invoices using Microsoft Excel and Word, verifying product quantities, pricing, tax calculations and invoice totals for accuracy.
- Sourced potential customers through Google, IndiaMART and Justdial, compiling prospect data in Excel and generating 20–30 leads per month.
- Drove customer acquisition through referral networks, targeted email outreach and Instagram, converting approximately 3–4 prospects into customers monthly.
- Organised sales records, customer data and transaction documentation, keeping billing, account tracking and operational reporting accurate and easy to retrieve.
- Managed customer orders and sales activity from enquiry to delivery, enabling timely customer follow-ups and better day-to-day operational decisions.

Product Management Intern

Aug 2023 – Oct 2023

TheGenz Dungeon

- Conducted market research and trend analysis for prospective clothing designs, assessing customer preferences and market demand to evaluate product potential.
- Benchmarked competitor offerings, clothing styles and design trends to support product differentiation and inform product development decisions.

- Structured research findings and evaluated design options to help finalise the product, coordinating inputs ahead of launch.
- Tracked project timelines, followed up on pending tasks and coordinated deliverables to prepare for product launch.
- Consolidated research findings into structured reports and recommendations to support product selection and launch-related decisions.

PROJECT EXPERIENCE

CallCue: AI Live-Call Assistant for Sales Reps *Oct 2026*

Tools Used: Python, FastAPI, Supabase (PostgreSQL, Auth), Groq LLM API, JavaScript, Render, Vercel
GitHub: https://github.com/Arnnnnnn/callcue-api | **Live Demo:** https://callcue-api-callcue-web.vercel.app/

- Built and deployed a full-stack web app that guides reps through a cold call, with a stage tracker (opening, discovery, pitch, objection, close) that shows the next line to say.
- Integrated an LLM (Groq) to personalise the stage lines and the replies to objections from details the rep types about the prospect (name, company, notes), with prompts constrained to the given facts so it doesn't invent claims.
- Designed a reliable objection-handling flow: approved replies stored in Supabase, LLM matching of what the prospect said, keyword-matching fallback, and a generic reply if the AI call fails, so the screen never goes blank mid-call.
- Added user accounts with Supabase Auth (email and password). The API verifies each request's token, and each user gets their own call-outcome logs and stats.
- Built the REST API with FastAPI and deployed it on Render, with the frontend on Vercel and data in PostgreSQL.

Data Support — Early-Stage Diabetes Prediction Study *Jul 2026*

Tools Used: Python, Pandas, Excel

- Cleaned and preprocessed a 520-record clinical dataset (16 attributes) for machine-learning model development: standardised column names and text formatting, and encoded 14 symptom fields, gender and the diabetes outcome as numeric values.
- Audited the raw data for missing values, duplicates and inconsistencies: removed 269 duplicate records to leave 251 unique patients, confirmed zero missing values and valid categories, and documented the 13-step cleaning pipeline and field assumptions for the team.

Data Support — Multi-Sensor Fire Detection & Victim Rescue System *Mar 2026 – Apr 2026*

Tools Used: Python, Excel

- Processed flame, gas and temperature sensor data for a hazard detection system, labeling and structuring readings into fire, gas leak and normal conditions.
- Screened readings for gaps, outliers and inconsistencies to confirm accuracy before the data was passed on.

EDUCATION

Master of Business Administration (MBA), Finance *Aug 2025 – Aug 2027*

School of Open Learning, University of Delhi (in progress, 2nd year)

Bachelor of Business Administration (BBA) | JIMS Rohini *2021 – 2024*

CGPA: 7.8 / 10

Senior Secondary (Class XII) | Prabhu Dayal Public School *2021*

88%

Secondary (Class X) | Prabhu Dayal Public School *2019*

95%

COURSES & CERTIFICATIONS

- **Data Analytics Job Simulation, Deloitte (via Forage)**, Oct 2026: practical work on data analysis and business insight reporting.
- **Data Visualisation: Empowering Business with Effective Insights, Tata (via Forage)**: turning data into clear visual stories for decision-makers.
- **An Introduction to Programming Through C++, Indian Institute of Technology Bombay**: programming fundamentals and logic.
- **Business to Business Marketing, Indian Institute of Technology Roorkee**: B2B market and customer concepts.
- **Excel Skills for Business Finance, Forage**: applying Excel to financial analysis, modelling and business reporting.
